

HOW MUCH DATA IS KEPT "LIVE"?

When LJ was initially setup, you will have decided how many days data is kept "live" on your system. On the first of each month LJ will look back the specified number of days and delete any data that is older.

To check how many days have been specified you will need to look at **[Store data paths]** within LJ Setup. But first you will need to shut down LJ, and then run the LJxSetup program.

Once LJ is shutdown, select **[Store data paths]**. You can check or amend the number of days entered in **Days to keep data**. If you do amend the number of days, don't forget to click **[UPDATE]** before you close the LJ Setup window, then restart LJ.
